**MIDWEST
CHP
APPLICATION
CENTER**

The Midwest CHP Application Center was established for the U.S. Department of Energy (DOE) as a partnership between the University of Illinois at Chicago Energy Resources Center (UIC/ERC) and the Gas Technology Institute (GTI). Its mission is to provide application assistance, technology information, and educational support relating to Integrated Systems for Cooling, Heating, and Power (CHP) for Buildings in the eight Midwest states of Illinois, Indiana, Iowa, Michigan, Minnesota, Missouri, Ohio, and Wisconsin.

A CHP system is defined as an integrated system, located at or near a building / facility, that provides a portion of the building's electrical load and utilizes the thermal energy from the electric generation equipment to provide cooling, heating, dehumidification, and/or increased indoor air quality. These systems utilize commercially available technologies, and if properly sized and installed, can provide:

- Reduced Energy Costs
- Improved Power Reliability
- Increased Energy Efficiency
- Improved Environmental Quality

The vision of the Center is that by the year 2020, Integrated CHP Systems will be the preferred method of energy utilization in commercial, institutional, and industrial buildings / facilities.

The Midwest CHP Application Center can help you answer these and many more questions:

- Is my building a good candidate for CHP?
- What CHP technologies best fit my application?
- What benefits can I expect from investing in a CHP system?
- Are there other similar installations that I can learn from?
- How can I sell the concept to my superiors?
- What are the permitting, installation, and operational issues I should be concerned about?
- How can I find engineering design and/or financial help?
- How do I interact with my local utility?

Take advantage of this service, contact the Midwest CHP Application Center today and learn more about how you can benefit from this energy efficient, environmentally friendly energy concept.
